PRESS RELEASE #1

Europe 4.0 Digital Citizens Officially Launched During the first Transnational Project Meeting

APROXIMAR

Members of the Consortium gathered in Athens, on the 13rd and 14th March 2024, on the occasion of the first face-to-face project meeting. In the event, each partner had the opportunity to introduce their organization. A in-depth presentation to the Intellectual Outputs was also made by the respective partner organizations, responsible for leading each set of activities. Since then, the Partnership has been collaborating towards the development of the **tailored-made Europe 4.0 Digital Citizens Curriculum**, which aims to immerse learners into the recent changes in the sphere of ICT and to introduce them to the fundamentals of the new digital technologies so that they can harness their

full potential. It will also explore what are and how to develop the higher cognitive interpersonal and self-leadership skills that are now required in this regard. To do so, the Curriculum will address “The New Technologies of the Digital Age”, which will bring out 10 vital disruptive technologies that require great skills upgrades for a future-ready Europe & “Preparing ourselves for the future: Cognitive, Interpersonal and Self-Leadership Skills”, that will highlight new sets of foundational skills that will become vital in this automated, digital and dynamic world. This means that we have launched WP2!

Follow Europe 4.0 Digital Citizens on social media to receive updates on the Curriculum and on other project activities.
