The WP3 activities were implemented by PRISM Impresa Sociale in Italy during November and December 2024. Initially, three workshops were organized as part of WP3. These took place at a high school in the town of Marineo, located in the province of Palermo. The first three workshops engaged a total of 47 students. To further increase local involvement during this phase of needs analysis, PRISM decided to organize an additional workshop. This fourth workshop was held at a university residence in Palermo and included both on-site and online participation, involving 10 on-site university students from various faculties and 5 online participants. In total, 62 participants took part in the WP3 workshops, of which 57 were in situ participants, 5 online participants (only in the last fourth workshop). All workshops followed a consistent format, divided into two parts: PART 1. Exploration of European values This phase was based on the toolkit developed by PRISM for the participants. During this part, students listened and shared reflections on their perceptions of the European Union. "Thank you for giving us this opportunity to travel abroad, which doesn't happen every day, and to get to know new countries and new cultures." "I thank this project because it made us understand that the European Union is a great opportunity for many countries and that we are not alone." "I'd like to thank PRISM for helping us talk about our needs and needs to be met to live in a better country" Testimonies from students from Marineo, municipality of Palermo, after taking part in workshop.

PART 2. Needs analysis This phase was conducted according to the methodology proposed by the project coordinator and used in all three countries. It was more interactive, involving activities such as scenario analysis, guided discussions, and collaborative reflections. Participants also completed their individual assessment cards, anonymously responding to a questionnaire. The insights and reflections from the group discussions were gathered and analysed, providing valuable input for the needs analysis phase.
